

DESCRIPTION

GenTite Peel & Stick TPO (SA) membranes consist of a heat weldable roofing sheet laminated to a pressure sensitive adhesive. Designed for fully adhered applications, these membranes exceed all of the requirements of ASTM D 6878-03 Thermoplastic Polyolefin membrane. The membranes are reinforced with high quality polyester for added strength and stability.

INSTALLATION

Peel & Stick TPO Membranes are designed to be installed as fully adhered systems. Refer to current GenTite Application Instructions for additional application instructions.

PREPARATION OF SUBSTRATES

- 1. Substrates must be clean, dry, smooth, and free of sharp edges, tins, loose or foreign materials, oil, grease, or other materials which may damage the membrane.
- All rough surfaces which could damage the membrane shall be repaired as specified to offer a smooth substrate.
- 3. All surface voids greater than 1/4" (6.35 mm) wide shall be properly filled with an acceptable material.

INSTALLATION - MEMBRANE

- 1. Peel & Stick TPO is intended to be installed over dry, smooth, dust free approved substrates.
- 2. GenTite Primer should be applied with a medium nap roller at a coverage rate of 200 250 ft² per gallon (4.91-6.14 m²) one side application on concrete, masonry, and other porous and irregular substrates or on all surfaces when the temperature drops below 50°F (10°C).
- 3. Unroll enough GenTite Peel & Stick TPO membrane to cover the approved substrate. Position the membrane over the substrate for proper alignment and allow it to relax for 30 minutes.
- 4. Fold the outer half of the membrane back onto itself exposing the release liner. Remove the release liner by pulling at a 45° angle exposing the pre-applied adhesive. Roll or mate the membrane into the substrate starting in the middle of the panel working out to both edges/sides to minimize wrinkling of the panel.
- 5. Repeat the same procedure on the other half of the membrane. Make sure that the release liner remains in place over the seam areas.
- 6. Using a broom, apply positive downward pressure to the GenTite Peel & Stick membrane, working from the center out to the edges of the membrane to remove any trapped air and to increase contact points with the substrate.

INSTALLATION - SEAMS

- 1. Fold back the lap area without creasing the membrane and expose the bottom side of the membrane.
- Prior to seaming the TPO (SA) membrane, apply GenTite Primer to the entire seam of the TPO membrane with a Scrub Pad and Handle. ROLLER APPLICATION IS NOT ACCEPTABLE. Allow the primer to dry to the touch of a clean dry finger. Remove the release liner and mate the two surfaces together with a broom or by hand pressure avoiding wrinkles and fish mouths.
- Using a hand roller, roll the entire seam area with a silicone roller in perpendicular then parallel
 motions. Apply GenTite Cover Tape and Edge Caulk to all seam areas to complete the seaming
 process.

PRODUCT DATA

THICKNESS	COLOR	SIZE	WIEGHT	PRODUCT#
45 mil (1.14 mm)	WHITE	6.25' x 50' (1.91 m x 15.24 m)	84 lbs (38 kg)	W59GT30068

STORAGE

Store in original, unopened packaging and away from sources of punctures and physical damage.

Assure that structural decking will support the loads incurred by the material stored on roof top. The deck load limitations should be specified by the project designer.

SHELF LIFE

12 months

PRECAUTIONARY DATA

To avoid sources of punctures and physical damage, take care when moving, transporting, or handling. Waste products such as petroleum products, greases, animal fats, and oils (mineral and vegetable) should be isolated from the membrane. Refer to Material Safety Data Sheet for additional information.
